America’s Electric Companies Are Leading on Clean Energy

Electric companies invest more than $120 BILLION+ each year, on average, to:

- Make the energy grid smarter, stronger, cleaner, and more secure.
- Diversify the nation’s energy mix.
- Integrate new technologies that benefit customers.

70% of the solar energy in the country.

40%

Electric companies provide more than half of new electricity generation capacity was wind and solar.

Today, 40% of all U.S. power generation comes from clean, carbon-free sources, including nuclear energy, hydropower, wind, and solar energy.

Electric companies are investing nearly $3.7 billion in customer programs and projects to deploy charging infrastructure and to accelerate electric transportation.

In 2020, energy efficiency programs saved enough electricity to power 30 million U.S. homes for 1 year.
