Here are five facts to know about our industry’s clean energy transformation:

1. Across the country, EEI’s member companies are working to get the energy we provide to our customers more affordably. In addition to reducing carbon emissions, this is also about increasing energy security and reliability, building smarter energy infrastructure and to integrate more renewables and clean energy technologies into the energy grid. By attracting and retaining top talent, EEI’s member companies are committed to making a net-zero carbon future a reality for all Americans.

2. Since 2010, America’s electric companies have invested more than $1 trillion to modernize the grid. The track record of America’s electric companies over the past decade, together with the continued leadership of U.S. electric companies in reducing carbon emissions and the vital role that reliable, affordable, secure, and resilient clean energy plays in achieving net-zero economy-wide, this event will address climate change, and help reach net-zero emissions. Nat Keohane, president, National Association of Regulatory Utility Commissioners, will join the panel to provide opening remarks for this event, to be moderated by Brian Wolff. Panelists will include Caroline Choi, senior vice president of Energy and Environment, Center for Climate and Energy Solutions, will provide opening remarks for this event, to be moderated by Brian Wolff. Panelists will include Caroline Choi, senior vice president of Energy and Environment, Center for Climate and Energy Solutions. CEOs from the electric power sector and other sectors will highlight initiatives they are advancing the development of low- and zero-emitting clean energy technologies to help the electric power sector and the United States reach net zero greenhouse gas emissions by 2050. This event will highlight efforts to promote the use of electric vehicles, including the National EV Charging Initiative, a new stakeholder effort involving EEI and its member companies.

3. We are proud of what we already have achieved, and we are committed to continuing to reduce carbon emissions in sectors—transition to clean, efficient electric energy. This is just the start. With our sector and to helping other sectors—particularly the transportation and industrial sectors—EEI’s member companies are committed to reducing carbon emissions.

4. The leadership of EEI’s member companies in reducing carbon emissions is essential to the customers and communities we serve. Nearly 50 EEI member companies already have announced long-term carbon reduction goals. The leadership of EEI’s member companies in reducing carbon emissions is essential to the customers and communities we serve. Nearly 50 EEI member companies already have announced long-term carbon reduction goals. The success of the clean energy transformation of the electric power industry—will require diverse, equitable, and inclusive ideas and approaches to clean energy, electrification, energy grid modernization, energy affordability, reliability, resilience, safety, and cybersecurity.
