

entities have unmet needs. Senior officials from the Department of Energy, Department of Homeland Security, Federal Energy Regulatory Commission, and National Energy Dominance Council joined CEOs from all segments of the electric power industry on the call. ESCC coordination will continue throughout the event to help ensure an efficient restoration.

“America’s lineworkers and support teams are staged and ready to work around the clock to safely restore power in harsh winter conditions and serve customers,” said **Drew Maloney, President and CEO of the Edison Electric Institute (EEI)**. “Industry and government leaders are aligned to support a safe and efficient restoration across our nation.”

Electric service providers in the path of Fern have activated their emergency response plans and are strategically repositioning crews, equipment, and resources to be ready to begin damage assessment and response efforts as soon as it is safe to do so.

“Electric cooperatives are well-versed in safely responding to mother nature’s worst and have been preparing for this winter storm for days,” said **Jim Matheson, CEO of the National Rural Electric Cooperative Association (NRECA)**. “Electric co-ops have been coordinating ahead of the storm to ensure we can respond to potential power outages as quickly and safely as possible, drawing on crews from unaffected areas if needed. We urge consumers to take the storm seriously and prepare for the possibility of extended power outages.”

Customer and restoration worker safety is the industry’s top priority. Customers should never use portable generators or grills indoors or in other enclosed areas where lethal fumes can accumulate. Customers also are reminded to remain vigilant against scams. Electricity providers will never demand cash or app payments for restoration services.

“During an energy emergency, reliability is a safety issue, not a policy debate, and when temperatures drop, the electric system has to perform,” said **U.S. Department of Energy Deputy Secretary James P. Danly**. “The Department’s coordination with the ESCC, utilities, and federal partners is essential during Winter Storm Fern to deploy every available resource—including more than 35 gigawatts of backup generation—to keep the lights on, protect American families, keep homes heated, and hospitals running and accelerate restoration. Reliability and affordability are the standard, not the exception.”

About the American Public Power Association

The American Public Power Association is the voice of not-for-profit, community-owned utilities that power 2,000 towns and cities nationwide. It represents public power before the federal government to protect the interests of the more than 55 million people that public power utilities serve across the United States and its territories. We advise on electricity policy, grid technology and operations, and workforce development in support of safe, modern, and resilient utilities.

About the Edison Electric Institute

The Edison Electric Institute (EEI) is the association that represents all U.S. investor-owned electric companies. Our members provide safe, reliable electricity for nearly 250 million Americans, and operate in all 50 states and the District of Columbia. Collectively, the electric power industry supports more than 7 million jobs in communities across the United States and drives economic growth and prosperity. EEI also includes hundreds of industry suppliers and related organizations as Associate Members.

About the National Rural Electric Cooperative Association

The National Rural Electric Cooperative Association is the national trade association representing nearly 900 local electric cooperatives. From growing suburbs to remote farming communities, electric co-ops serve as engines of economic development for 42 million Americans across 56 percent of the nation's landscape. As local businesses built by the consumers they serve, electric cooperatives have meaningful ties to rural America and invest \$15 billion annually in their communities.
